## NOUVEL's Jim Herbeck to present SANS Institute webcast "Managing System-related Risk for SMEs" on 15 May

(Geneva, Switzerland) 20 Feb 2012. NOUVEL Strategies partner Jim Herbeck will be the featured speaker at a SANS Information Security Webcast on Tuesday, 15 May, 3pm CEST. The topic will be "Managing System-related Risk for SMEs":

Some organizations think that their firewall provides all the protection their desktop and server systems require. "I know one organization that had simply stopped applying operating system security updates— they thought it was a waste of time," says Jim Herbeck, presenter of this webcast on information security for SMEs. "While firewalls block many attacks, they can't and don't block everything. Security on your desktop and server systems is an important second line of defense against those attacks that get past your firewall," Herbeck explains. This webcast offers concrete advice for SMEs about managing system-related risk from ISO 27001 and the SANS 20 Critical Security Controls. The webcast will be of interest to anyone who's responsible for managing, developing, or implementing information security at an SME.

This is the sixth webcast in the Information Security for SMEs series. Each webcast addresses a specific area of information security and offers pragmatic advice for SMEs. Details about the series can be found at the NOUVEL website: <http://nouvelstrategies.com/InfoSec-for-SMEs>

SANS Information Security Webcasts are web broadcasts, including live audio while viewing presentation slides. Participation is free, though registration is required. Details can be found at the SANS website: <https://www.sans.org/webcasts>

The webcast is scheduled for 3pm CEST (Central European Summer Time), 2pm BST (British Summer Time), 9am EDT (US Eastern Daylight Time) on Tuesday, 15 May 2012.

Note: In the US, SMEs are more commonly referred to as Small and Medium Businesses (SMBs).

### Notes for Editors:

**About the SANS Institute:** The SANS Institute was established in 1989 as a cooperative research and education organization. SANS is the most trusted, and by far the largest, source for information security training and security certification in the world. In addition to world-class training, SANS offers certification via the ANSI accredited GIAC security certification program. SANS offers a myriad of free resources to the InfoSec community including consensus projects, research reports, and newsletters; and it operates the Internet's early warning system - the Internet Storm Center. At the heart of SANS are the many security practitioners in varied global organizations from corporations to universities working together to help the entire information security community.
